

Installing a Citybox module

Follow the steps below to correctly install a Citybox:

1. Identify and consign the mast
2. Retrieve the label and paste it on the plan, so that the configurator enters the identification and positions it in its remote management tool. If necessary, record the assets information
3. Open the mast inspection door and mark the cables with their labels (DALI: Digital Addressable Lighting Interface)
4. Check the ballast cables, then make a VAV to ensure safe operation
5. Open the cover of the Citybox and retrieve the small tools inside
6. Screw the fastener to the rear of the Citybox
7. Prepare the power cable: crimp both cables and then pass them through the Citybox's cable gland)
8. Insert the power cable into the cable gland on the right
9. Then place the auxiliary cable in the middle
10. Then place the lantern cable in the third position
11. Insert the cables into the Citybox using the flathead screwdriver, pressing the top of the terminal block to open the mechanism. Insert the cables
12. Wire the three cables according to the configuration written on the Citybox, then close the Citybox using the Torx screwdriver.
13. Connect the Citybox power cable in the Class 2 box
14. Reposition the fuse holder and all cables in the class 2 box, then close the box
15. Reposition the class 2 box and the Citybox inside the mast and close the inspection door
16. Continue to deconsignment
