

# Installation of Citybox Controller

Follow the steps below to instal a Citybox Controller in a cabinet.

1. The lock-out manager locks-out the general power supply of the cabinet.
2. Open the cabinet and carry out a Voltage Absence Test - VAT (remove the breastplate) to ensure safe working conditions.
3. Prepare the power cables.
4. Fix the cables to the left terminal block of the Citybox Controller using the flat head screwdriver.
5. As previously, wire the part connected to the control relays to the OUTPUT terminal block, wire the terminal block connected to the Meter. On the INPUT terminal blocks of the Controller, wire the on/off monitoring loops (Door opening, loss of output or other).
6. Connect the power supply.
7. Fix the Citybox Controller to the rail provided for this purpose taking care not to press on the area of the screen.
8. At the end of the work, the lock-out manager tags out the general power supply and drafts the tag-out certificate.
9. Return to AUTO mode, close the cabinet door and dismount the contacts.
